**DETAILED ACTION**

***Claim Rejections - 35 USC § 103***

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

3. Claims 9-24 are rejected under 35 U.S.C. 103(a) as being unpatentable over Fujiwara et al. 6,833,411, in view of Heimerikx et al. 6,949,593.

4. Fujiwara et al. disclose block copolymer, styrene content, butadiene/isoprene ratio, molecular weight, asphalt and concentrations in claim 1, column 4, lines 13-62 and column 6, lines 52-61. Fujiwara et al. do not mention diblock content, however Heimerikx et al., who teach a styrenic block copolymer with a mixed butadiene/isoprene midblock (column 4, lines 45-58), recite a diblock content of 5-25%, preferably 10-25% as a typical example. It would have been obvious to one having ordinary skill in the art;

Art Unit: 1714

at the time the invention was made to use a polymer having the coupling efficiency shown by Heimerikx et al. in the composition of Fujiwara et al., since it is the usual diblock content for triblock copolymers.
